AGENDA FOR TELEPHONE INTERVIEW

A telephone interview with the Examiner is scheduled for Tuesday, October 31, 2006 at 11:00 am ET. The following issues are proposed for discussion during the interview.

Rejection of Claim 18

Claim 18 is set forth below for discussion purposes.

18. (Previously Presented) A method of speech recognition based on interactive information retrieval for ascertaining and retrieving a target information of a user by determining a retrieval key entered by the user using a speech recognition processing, comprising the steps of:

RECEIVED
CENTRAL FAX CENTER

OCT 27 2006

- (a) storing retrieval key candidates that are classified according to attribute values of an attribute item in a speech recognition database;
- (b) requesting the user by a speech dialogue with the user to enter a speech input indicating an attribute value of the attribute item for the retrieval key, and carrying out the speech recognition processing for the speech input to obtain a recognition result indicating attribute value candidates and their recognition likelihoods;
- (c) selecting those attribute value candidates which have recognition likelihoods that are exceeding a prescribed likelihood threshold as attribute value leading candidates, and extracting those retrieval key candidates that belong to the attribute value leading candidates as new recognition target data;
- (d) requesting the user by a speech dialogue with the user to enter another speech input indicating the retrieval key, and carrying out the speech recognition processing for the another speech input with respect to the new recognition target data to obtain another recognition result; and
- (e) carrying out a confirmation process using a speech dialogue with the user according to the another recognition result to determine the retrieval key.

The Examiner rejected Claims 18, 19, 37, 38, and 40-42 under 35 U.S.C. §102(e) as being anticipated by U.S. Pat. No. 6,246,981 to Papineni ("Papineni"). As discussed in more detail in the previously filed response, the invention of Claim 18 is directed towards speech recognition. The claimed invention selects attribute value candidates that exceed a prescribed likelihood threshold as attribute value leading candidates. Selecting attribute value leading candidates serves to narrow down the possible attribute value candidates without having to uniquely determine the attribute value. The Examiner alleged that Papineni describes the narrowing down of candidates, as claimed by Claim 18. Papineni describes a dialog manager and script. The system operates using either text or speech. Col. 5, lines 22-24. Although the system can use speech recognition, the "natural language understanding unit . . . may be performed by conventional units," so the focus of Papineni is

task completion, not speech recognition. Col. 8, lines 11-17. The dialog manager described by Papineni has "task-oriented forms for associating user input information therewith, the dialog manager being capable of selecting an applicable form from the task-oriented forms responsive to the input information." Col. 3, lines 10-16.

The Examiner is invited to call the undersigned at 404/685-6799 if anything else is needed prior to the interview.

Respectfully submitted,

By: Brenda O. Holmes
